EzGov's FlexFoundation (TM) allows government agencies to deploy tax filing, fee collection, registration, and other applications to a variety of devices. The open, scalable system integrates with existing applications. It also includes Web services interfaces. FlexFoundation can be customized to meet specific processing demands. The system includes security and globalization features. It supports multiple languages, currencies, payment methods, and validation tasks. FlexFoundation's FlexFoundation E-forms component supports the development and maintenance of multi-page forms. The forms capture, validate, and store input that can be tied to multiple data sources. The browser-based E-forms Builder and form **templates** features streamline **development** tasks. The FlexFoundation Business Rules Engine supports the development of reusable business policies. It includes validation, calculation, and other features. FlexFoundation's FlexFoundation PaymentEngine (TM) simplifies payment processing, providing agencies with real-time authorization, invoice management, electronic fund transfer, automated return, and payment, deposit, and activity reporting features.

BellSouth's BellSouth-My-Way, a national small-business portal service, hosts applications for small companies and assists in deploying business-to-business (B2B) e-commerce sites. BellSouth-My-Way is an example of a new type of resource available to smaller companies, who represent a large new market for vendors of B2B products. According to an analyst, the small-business user is an attractive customer to B2B service providers because 'Currently, many small companies are unsophisticated from a technology standpoint, so online exchanges and ASPs can bring tremendous value to them for a comparatively low cost.' According to one estimate, under 300 online marketplaces existed in November 1999 but that number increased to approximately 1,000. A spokesperson for Concierge at Large, which uses Biztro-hosted payroll and benefit administration applications, says using the online marketplace reduces staffing by one HR person. Biztro provides applications through a password-protected portal and also offers **online procurement** for small companies. Biztro links to office product and system providers, such as OfficeMax and Dell Computer, which pay Biztro for each purchase made by a small company. Because Biztro and other small companies providing B2B services want to make their offerings easier to set up and use, they provide such work-savers as **templates** that assist small companies in **creating** company bulletin boards, employee phone lists, and organizational charts.

works.com is an **online** office supplies **procurement** service that offers easy automation, competitive pricing, and good purchase approval models, though the lack of report integration should be addressed in future versions. This business-to-business Web site service provides a good combination of consumer e-commerce and user-access controls for making it easy for users to make corporate office supply procurement purchases. Most prices on Works.com are lower than the leading office supply retailers, leading analysts to say that this will be a growing area of market growth in the year to come as works.com becomes more successful. Not requiring any upfront investment, corporations can easily set up corporate accounts and freely browse the services selection of office supplies before evaluating prices and purchases. **Customized order templates** can be **created** for each department or individual employees within a company, and purchase approval processes can be tailored to require authorization before purchase when customers who have exceeded their budgets or purchase goods not approved for a department or employee. The service's features are good, but future versions should include the ability to import reports directly into

customer business applications.

Microsoft has announced the company's new Microsoft E-Commerce Alliance, Commerce One announced BuySite 5.0 Enterprise Edition, and Netscape has announced e-commerce improvements to its purchasing software. The Microsoft E-Commerce Alliance intends to create the space for software partner vendors to develop better direct marketing, employee self-service, supply chain, small business, and Web **design template** applications. More than 200 partners are already involved with the Alliance plan, and another 100 are expected in the next 12 months. BuySite is a stripped-down version of the company's **online - procurement** software package, though it still costs \$500,000 for 500 users. The company recently announced major losses in light of a filing with the Securities and Exchange Commission. Netscape's e-commerce efforts are largely geared to provide **online procurement** buyers with access to multiple data and buying sources from within a single user interface.

Microsoft's Microsoft Site Server 3.0 Commerce Edition represents Microsoft's entry into the electronic commerce market. The offering includes Microsoft Market and a sample site **template** that can be used to **develop** intranet-based purchasing applications. Microsoft contends that it is not entering the procurement applications business, but does offer the product as a starting point for those who want to build their own applications. The latest upgrade to Ariba's Java-based Operating Resource Management System (ORMS) 3.0 purchasing software includes integrated data sharing with SAP R/3, along with automatic reconciliation with corporate purchasing card transactions, and more automation of data between buyer and seller catalogs. This release also extends ORMS with new forms for purchasing capital equipment and business services. Ariba claims that the offering represents a complete **online procurement** solution for the enterprise, and the Microsoft Market offering is merely a starting point. Microsoft Market is based on code from a procurement application Microsoft developed internally. Site Server Commerce Edition 3.0 includes the Commerce Interchange Pipeline, which lets companies exchange data over the Internet or through legacy interchange systems.

CyberWolf's ACUMEN Book (TM) is a sales, marketing, and communications system geared to book publishers. Tapping ACUMEN Book, organizations can streamline workflows and improve productivity. The system's integrated reporting tools improve decision making processes. ACUMEN Book can support up to 100 concurrent users, and the system offers employees remote access with Windows Terminal Server (R) or Citrix technologies. The program encompasses general ledger, inventory management, order entry, accounts receivable, accounts payable, back order management, and sales analysis. It also offers users marketing, communications, e-mail, job costing, royalties, contract management, and purchasing options. ACUMEN Book can be extended with consignment distribution, **electronic data interchange (EDI)**, e-commerce, credit card-processing, foreign currency, remote fulfillment, subscription, and other optional modules. Activated modules automatically integrate into main systems.

Manugistics' NetWORKS Carrier, eXtensible Markup Language (XML), and **electronic data interchange (EDI)** are highlighted in a discussion of private procurement trading conducted over private networks, which will constitute almost 90 percent of all B2B commerce in 2000. One example is the system under development by Dana, an auto supplier, which will **automate procurement** at 320 facilities in 32 countries over the next two years. Ariba, i2, and IBM components are used, but Dana's 10 suppliers, which represent 650,000 products, do not trade through a public hub. According to a spokesperson for Manugistics, such companies are seeking enterprise supply chain tools, and they are not interested in large exchanges. CEOs are only interested in the Internet for assisting with direct connections to customers and suppliers. Fleming Companies uses NetWORKS Carrier as the backbone for its private trading network, which centralizes logistics for trading 650,000 loads of food products each year over the Internet. Fleming has a mammoth legacy system, and NetWORKS Carrier is directly connected with **EDI** systems to allow real-time access. Smaller suppliers can participate, and the cost of IT operations is lower. Dell uses the Oracle Financials system with an added online purchasing function from Ariba. The system allows vendors to have an online catalog or Dell can ship its orders to suppliers via **EDI**, XML, e-mail, fax, or paper.

Business-to-business electronic presentment and payment services (EBPP) allow trading partners to interact through their invoices, to combine invoices, and to communicate with their suppliers, and, as e-commerce becomes more global in nature, the market for online billing and credit services is exploding. The business-to-business (B2B) market is 10 times the size of the consumer market, and one vendor says that involved documents can sometimes be made up of hundreds of pages that must be processed in 'sub-second timing.' The software that is needed has to be sophisticated in order to bridge the capability differences between buyers and sellers, and the leading service providers say that their products are cheaper than **EDI (electronic data interchange)**. Not to be outdone in the growing EBPP market by startup companies, banks such as Bank of America, Citigroup, and Chase Manhattan have formed alliances with **B2B electronic procurement** firms.

GRADE: Product Analysis, No Rating

A recent survey by The Boston Consulting Group (BCG) shows that 30 percent of companies have deployed **electronic procurement**, with an average investment of between \$2 and \$4 million. The average return on investment is 300 percent, and 70 percent of suppliers are ready to collaborate with users' e-procurement strategies. The numbers come from comprehensive interviews with 200 purchasing managers and business-to-business intermediaries. Analysts and users contend that most companies will encase rather than replace their existing **electronic data interchange (EDI)** systems since **EDI** is still useful for providing high levels of standardized product and transaction information to supply chain partners. An analyst for BCG says BCG regards **EDI** and the Internet as a unified e-commerce marketplace. A spokesperson for a large electrical parts company agrees, saying companies will most likely continue using **EDI** for traditional transactions, including order confirmations, but will use XML for newer, more pressing kinds of transactions, including immediate online

purchasing. Many in the electrical parts industry have affirmed their commitment to **EDI** in e-commerce with the execution of a unique frame relay extranet that allows trading partners to share critical inventory ordering information. New translation software allows data to be sent in **EDI** format and to be easily translated into XML.

A discussion of preplanning required before implementation of automated supply chain management systems looks at direct materials purchasing and applicable technologies. Currently, industry experts believe that the Internet will obviate the need for intermediaries in the supply chain. Most business-to-business transactions will take place directly, but e-channels are really creating new markets for intermediaries. Among the more intriguing are e-marketplaces. Internet market developers and exchange managers are emerging in large numbers. They perform many services, including information exchange, online communities, spot bidding in **online** auctions, full service **procurement**, and inventory management. The e-marketplace can level the playing field, and has the potential to allow all suppliers to compete for business equally. Many companies that have gotten their internal enterprise computing systems under control are now turning their attention to integration and automation processes conducted between companies. Direct purchasing is the core of the supply chain, and direct materials can be divided into highly specific components, custom parts manufactured to specification, and commodity parts and materials. Supply chain automation employs technology to lower the number of, or eliminate altogether, the manual processes required for purchasing. Among technologies used are forecasting systems, **electronic data interchange (EDI)**, and extranets. To be effective supply chain systems they must have a comprehensive and strategic view of the purchasing process.

Clarus E-Procurement 3.0 from Clarus, the enterprise resource planning (ERP) company formerly known as SQL Financials International, is an e-commerce application that allows users to manage supplier relationships and monitor back-end knowledge bases. Built over a suite of Microsoft's Component Object Model (COM)-based commerce components, Clarus expects E-Procurement to become a solid base from which other e-commerce applications will be built from. Back-end applications can be integrated with e-commerce programs using E-Procurement's data mapping tool. Users will be able to easily attach graphics and memo files to online purchases using the improved user interface. E-Procurement is unique in that it allows users to either aggregate content from supplier Web sites, or from online catalogs using HTML or XML tags.

Research firms predict that Web commerce will see \$200 billion in revenue by the year 2001. Presently, however, that may not be realistic. For example, the successful Amazon.com bookseller still sells less than 10 percent of its conventional competitor, Barnes and Noble. The first incarnation of electronic commerce was **electronic data interchange (EDI)**, which presented an automated method for exchanging business transactions. **EDI** is still used in e-commerce today. Manufacturers realize that e-commerce goes beyond hard automation, it reinforces the concept of keeping people in the equation, not allowing automation and robots to take over. Advanced Micro Devices, for example, has embraced a Web-based catalog solution to manage procurement of incidental office and facility supplies. Web ordering eliminates purchase orders and the need to place an order on the phone for small quantities of office supplies, and

the approval workflow is **automated**. The end result is that **procurement** specialists have more time to troubleshoot bottlenecks, and more time to negotiate better deals, since they do not have to spend as much time actually executing the transactions.

The National Institutes of Health has released new **electronic** purchasing software called **Procurement** Vehicle Management (PVM). PVM will be used to let customers order products and services from the NIH's governmentwide, indefinite-delivery indefinite-quantity (IDIQ) contracts through a World Wide Web browser. The software was developed for NIH by Information Flow as a way for government resellers to assess products available to them from suppliers. The application will let customers compare products from multiple vendors, without having to require vendors to maintain current product listings in a central catalog. When Information Flow created the application, they rejected the shopping cart approach used by many other purchasing systems. While the shopping cart approach is useful when a buyer knows what they want to configure, it is less effective when a buyer is addressing functional requirements, and not specific products. Agencies purchasing from the NIH's Electronic Computer Store II contracts must use the system. The system is one example of many new electronic commerce and Internet-based purchasing tools being deployed by government agencies.

Trade'ex Electronic Commerce Systems Incorporated's Market Maker will be moving Plasticsnet.com into being a full-fledged e-commerce site. Plasticsnet.com, a Web site built by Nick and Tim Stojka, receives questions from thousands of plastics industry engineers each week. As a result, Commerx.com is moving to the next step. It will transform Plasticsnet into an intermediary between plastics buyers and sellers. This will be a totally new addition to the Plasticsnet site, which now only provides information. The plastics market consists of many suppliers and buyers. No one supplier is dominant. There are 12,000 to 15,000 plastic processing companies and 5,000 companies which supply them. For this reason, the Stojkas think that their site can change the way plastics are bought and sold by consolidating the process on their Web site. Plasticsnet currently provides a minimal amount of commerce by letting users e-mail vendors from the site. The Stojkas' plan comes in three parts. First, they are setting up an **online procurement** site to link buyers and sellers. Second, they are establishing an online marketplace where customers can shop. Third, Commerx is going to handle the receivables in order to provide buyers a single invoice and to allay any fears about the insecurity of Web commercial transactions.

Intranet **procurement** systems, which **automate** buying and selling between vendors over Internet commerce lines, have been suffering from poor sales lately and will receive a boost from a host of intranet procurement companies, including Commerce One and Netscape, who are hoping to increase customer bases with a partnered effort. One such effort is a prepackaged content move where Commerce One is giving users of its BuySite **Electronic Procurement** Application access to over 5,000 online catalog suppliers, such as Office Depot, 3M, and Black & Decker. Though Commerce One is to be commended for its efforts, its small customer total of only 10 will not exactly restart the entire intranet procurement industry on its own. Industry analysts agree that although the return on investment (ROI) is automatic, one of the major reasons intranet procurement systems haven't taken off yet is due to many year 2000 woes and integration concerns for online business companies. Experts also suggest that intranet procurement systems have not yet seen the fullest extent of their potential.

Citibank will purchase significant numbers of servers from Netscape Communications, including Netscape's Netscape CommerceXPert, Netscape SuiteSpot Server, Netscape Directory Server, and Netscape Application Server products. CommerceXPert includes ECXpert, which adds a Macintosh interface, **electronic data interchange (EDI)**-type systems' SellerXpert, an **online** catalog system; BuyerXpert, for **automated procurement**; MerchantXpert, for profiling, one-to-one marketing and promotions. It also includes a complete administration workbench, dynamic display abilities, multiple pricing models, discounts, coupons, and flexible payment processing; and Publishing Xpert, a multitiered distributed application that uses Open Network Environment and also uses such technologies as Java, JavaScript, Dynamic HTML, Lightweight Directory Access Protocol (LDAP), and Common Object Request Broker Architecture (CORBA). Netscape's CEO Jim Barksdale regards the deal as a 'revolutionary arrangement,' and 'the next evolution of the Internet.' Citibank will employ Netscape's products to permit information and transactions to travel to many clients, including kiosks and PCs, as well as **EDI** terminals. They can then be linked back to multiple heterogeneous host systems. Citibank may also offer online trading services based on Netscape's products.

IBM InfoMarket's IBM World Purchasing Service, Elekom's Elekom Procurement, Microsoft's Microsoft SQL Server, and IBM's/Datamatrix's OrderLink are part of a discussion of a new system that **automates procurement** on the World Wide Web. Such tools as World Purchasing and Elekom **Procurement** either replace **electronic data interchange (EDI)** systems or work in tandem with them. Duke University Medical School paid expenses necessary to implement the systems at their suppliers' locations. When companies eliminate paper ordering materials, they can save as much as \$150 per paper purchase order for maintenance, repair, and operational (MRO) supplies. MRO procurement costs can be reduced by at least 20 percent, and systems are more efficient. Payback can be expected inside of a year for tools that support electronic purchasing and that integrate purchasing with the company's back-end procurement processes. Web-ready tools allow **procurement** departments to use **electronic**, intelligent, searchable catalogs that are extensible to departments that also have a need for the information. This process is called inward buying, and is only the initial step. Companies need tools that integrate the complete procurement process, which spans the gamut of functions from item selection to sending the digital form to suppliers. When assessing business-to-business electronic commerce systems, users should consider the functions provided for catalog, requisition, transaction, and interprocess management, as well as technology issues.

Computer Associates International's Accpac for Windows and Simply Accounting 3.0, AccountMate Software's Visual AccountMate 3.1, Advanced Software Development's UA Corporate Accounting, and Best!Ware's MYOB are among many accounts receivable and accounts payable products described.

Many AP/AR programs now allow accountants to accept electronic payment transfer, do unlimited account distributions, and create an infinite number of ship-to addresses for one account. They also offer advanced drill-down features that take users back to the first entry made, and can easily import/export financial data to other programs for more analysis. Users can post transactions to future accounting periods and use **electronic data interchange** (**EDI**) to send/receive such items as invoices and purchase orders. Other features provided in some programs are the ability to add customers and vendors on an ad hoc basis regardless of the accounting module being used. Accpac's AP module provides flexible payment controls, including the ability to place a hold on an individual vendor. Simply Accounting provides a view of a vendor's balance and year-to-date totals. Visual AccountMate provides features formerly only available on mainframes or minicomputers, including Transaction Rollback. U.A. Corporate Accounting integrates with all Microsoft Office and BackOffice applications, and MYOB is a low-cost, feature-rich program and a good value.

Lawrence Livermore National Laboratory receives bills from Federal Express via **electronic data interchange** (**EDI**). The bills, **EDI** invoices and forms sent by Internet e-mail, are automatically entered into Oracle Financials 10.5 and an Oracle 7.1.4 relational database management system (RDBMS). A functional acknowledgment (X.12 997) is then generated and sent to the sender of the invoice. FedEx is only one of five suppliers using Bank of America's Internet **EDI** trial payment system, which also uses encryption, digital signature, and Internet Simple Mail Transfer Protocol (SMTP) technologies. The arcane confirmation process used prevents intrusion from hackers. To crack the code, one would have to quickly decrypt message traffic, block and imitate e-mail to and from sender and receiver, be a valid Lawrence Livermore vendor/payee, and complete all hacking activities before a one-time transaction code expires.

An entertainment company's purchasing department makes excellent use of **EDI**. The company executed a three-part implementation when it started to use **EDI**, rolling out a Master Supplier Program, a **Procurement** Card Program, and an **Electronic** Commerce Program. The **EDI** system encompasses multiple departments that are involved with purchasing, including Accounting, Distribution, and Information Services. Before the **EDI** implementation, the company used a fax system that was similar, although instead of sending **EDI**-capable data, the information was sent via fax. The company now orders 60 percent of all items electronically, 24 percent through **EDI** and 36 percent via fax. The Master Supplier Program reduced the number of suppliers to the point where four vendors account for nearly half of the line items processed. The purchasing systems now automatically communicate with these vendors' warehouse systems for a fully **automated procurement** system.

Promotional data from vendors comprises the substance of this review of Accounts Payable and Receivable software. A number of packages support **EDI**

with electronic funds transfer (EFT). These functions, plus credit checking, support for regulatory compliance, and much more qualify Ross Systems' Renaissance CS Financials as a truly high-end offering. Intuit's QuickBooks 3.0 for Windows is a well integrated system recommended for small businesses. Also for new users and small business applications is DacEasy Accounting for Windows. Intuit and DacEasy provide built-in communication functions as well. PeopleSoft Financials is a network-based system featuring a strong accounts payable module. Peachtree Software provides a diverse selection of packages including the Complete Accounting for DOS 8.0 for DOS die-hards.

President Clinton has directed all federal agencies to demonstrate their ability to do **procurements electronically** by July 1995. Agencies rushing to implement **EDI** must deal with shifting technologies. Traditional mainframe **EDI** systems are being replaced by open-communication UNIX and PC products. Different contracting vehicles from which agencies can purchase **EDI** systems are described. Popular providers include General Electric Information Services, ABC/Sterling, and Harbinger **EDI** Services Inc. Pricing structures and the benefits of moving **EDI** applications to UNIX and client/server platforms are discussed. Analysts warn that emerging X.400/UNIX systems may require more tending than traditional systems.

The concepts and technologies involved in the automation of **procurement** functions are outlined here. **Electronic data interchange** (.EDI) is fundamental to **automated procurement**. EDI contributes to reductions in ordering-cycle-time frames and operating costs, while improving both accuracy and control. Key procurement processes include vendor selection, requisition approval, and acknowledgments. Online systems, with integrated support for **EDI**, must encompass all phases of procurement in order to be effective. Such comprehensive systems may be critical to the success of a business in today's marketplace.

Sun Microsystems is among users needing solutions 'that stress collaboration and strategic sourcing.' Providers of enabling tools are BlackHog, i2 Technologies, Oracle, Rapt, and Webango. They provide **online procurement** tools that are making the conventional buy-side/sell-side concept a Stone Age paradigm. The newer collaboration procurement solutions are more agile, smart, and inclusive. In an always dynamic business environment, collaboration and strategic sourcing are the newest and most attractive strategies. Since such high-profile companies as Sun and PRI Automation are using e-procurement ('Internet-based systems for the sourcing of indirect or direct materials'), it should have a bright future. Jeff Donnelly, president and CEO of BlackHog, says his system provides collaborative procurement that benefits buyers and suppliers, while also easing communications among them. BlackHog, says Donnelly, views the relationship between buyers and suppliers from the middle out, which allows the solution to ultimately integrate with **legacy systems** of buyers and sellers. An analyst says e-procurement will evolve to become an environment in which buyers can rationalize spending and automate replenishment. Among topics covered are intelligent procurement, the multiple layers of e-procurement (intelligence, workflow, and transaction), and the importance of vendor domain expertise.

Intuit's QuickBooks Premier (R) 2002 simplifies small business financial management processes, providing users with check printing, transaction searching, and estimating features. QuickBooks Premier 2002's EasyStep Interview (R) streamlines program configuration and customization. The system also includes online help. QuickBooks Premier users can define 20 different price levels that can be applied to customers. The product handles cash and credit sales. Business owners can track customer payments, expenses, and liabilities. The system now automatically adds a 'PAID' stamp to invoices. QuickBooks Premier can be employed in creating purchase orders; tracking inventory; customizing e-mail invoices, estimates, and statements; and in tracking time and billing information. The system supports online banking and bill payment transactions. It also provides users with sales tax tracking, data analysis, and report customization options. QuickBooks Premier includes 100 new report **templates** and reconciliation reports. QuickBooks Premier integrates with Microsoft (TM) Word and Excel, Symantec ACT!, and other programs. The system can support five users concurrently.

Among e-commerce companies providing rebate programs, **online procurement**, and application services are Foodbuy.com and Instill Foodscape. The two service providers aim to dominate the food business with many services, including negotiation of better prices with suppliers, management of the supply chain rebate programs, and hosted application offerings. Both companies compete with about two dozen other e-commerce startups that are developing portals, e-marketplaces, exchanges, or services serving the food industry, according to food industry consultancy Technomic. Foodbuy.com's CTO says the new food business portals are very valuable to food industry/restaurateur novices; Foodbuy's portal has relationships with over 100 manufacturers and 300 distributors. Foodbuy.com's business model assumes that smaller operators cannot acquire the pricing advantages of larger competitors, but Foodbuy.com is capable of leveraging the buying power of 4,000 participating independents to broker better prices from suppliers. Foodbuy.com also manages manufacturers' rebate programs that smaller operators might overlook because of the administrative workload. Foodscape provides online order-entry and offers payroll and 401K administration services. Operators can download spreadsheet **templates** to compute multiple management performance measurements that are important to food retailers, including per-plate cost.

...SPECIFICATION the flow of processing related with management of
deposit/payment related with the accounts receivable, **accounts payable**
and the **electronic** bonds which is conducted by the **EDI** subsystem 10
in the embodiment of the present invention.

Fig. 10 is a flow chart...posted on the sides of buyer and seller,
respectively, so that the information on the **accounts payable** and
receivable is created. The **electronic** CP subsystem 20 issues and
electronic bonds for the hypothecation of the accounts receivable. If...
from the financial institution A, the seller confirms received cash for
the issued bonds. The **EDI** subsystem 10 brings the information on the
accounts receivable into a state representing that the...chart showing
the flow of processing of the deposit/payment relating to the accounts
receivable, **accounts payable** and **electronic** bonds, which is
conducted by the **EDI** subsystem 10. After the seller confirms the
deposit of cash from the bond purchaser, he...

...she registers that the cash has been deposited in the central commerce
server 1. The **EDI** subsystem 10 receives a request of the registration
that the cash has been deposited from...

...in interest (step 101). Subsequently, when the payment is conducted by
the buyer and the **EDI** subsystem 10 receives a notification of the
payment from the member financial institution, the **EDI** subsystem 10
retrieves the information on the accounts receivable in the EDIDB 11
based upon...the information on the corresponding accounts receivable

. into a state "paid" (step 102). When the **EDI** subsystem 10 receives a request of the registration that the accounts receivable have been deposited...
...Subsequently, when the payment to the bond purchaser from the seller is conducted and the **EDI** subsystem 10 receives a notification of the payment from the member financial institution, the **EDI** subsystem 10 retrieves the information on the accounts receivable in the EDIDB 11 based upon...
...on the corresponding accounts receivable into a state "paid" (step 104). At this time, the **EDI** subsystem 10 retrieves the data on the relevant electronic bonds and corresponding bond purchaser in...

... to be updated; and if so, sends an Update Response, segment containing the latest OCR **templates** and any other necessary OSU software. (OCR **templates** will be explained in a later ...the OSU software. There are six types of units: "Font Update," which replaces the font **template** if it is already installed on the OSU device 10 or adds one if it doesn't exist, "Font Delete Header Image Update," which replaces or adds header **templates** , "Header Image Delete," "Form Update," which replaces or updates the form **template** , and "Form Delete". 0 Type 8 - DEX Submit (binary packet): The OSU device uses this...driver's licenses, optical analysis of the license may be the only reasonable way to **automate** infonnation **procurement** , as not all i5 states' licenses contain magnetic strips, and the magnetic data on the...is disclosed merely as a preferred embodiment. This section III discloses basic considerations of how **template** based character recognition can be performed in the disclosed DaviSTM system. Section IV, which follows...

...optical elements, such as holograms. Section V, which follows further below, discloses additional methods for **template** based character recognition with special focus concerning schemes for reducing the processing power and storage...could be coded in any number of ways to

. perform the tasks described herein.

B, **Template** -Based Character Recognition

The preferred method for optically determining the textual information printed on the face of an ID card, such as a driver's license, employs the concept of **template** -based character recognition. According to this scheme, one starts with an unknown character or other...

...and compares an optically scanned version of that character or image to a series of **templates**. The **templates** are compared to the scanned character or image to determine the extent of the "overlap" of each **template**. The **template** with the smallest - 34 degree of overlap, i.e., the one which "lines up" with the scanned image, is chosen as the **template** that matches, and therefore determines, the scanned image. Of course, because the **template** and the scanned image may be differently centered, the **template** may need to be slid (e.g., up and down, and from left to right...

...to the scanned image to ensure that the s degree of overlap is accurately assessed. **Template** -based character recognition involves two tasks: the recognition task itself and the task of **template** creation. This disclosure improves upon both of these aspects of **templatebased** character recognition in ways that are discussed below. With respect to the recognition task, assume...s) in the test image that represents one of K possible characters represented by K **templates**. (The procedure for generating the **templates** will be disclosed later). These **templates** are denoted $T_k(i,j)$, wherein $k = 1, 2, \dots, K$. The vertical and horizontal dimensions of the 01 **template** are denoted by l_{nk} and n_k respectively. **Template** matching involves comparing each of the K **templates** to the test image and choosing the **template** that is "closest" to the test image to determine the unknown character at (r,s) ...

...by calculating the least-squares "distance" between the test data $D(i,j)$ and the **templates** $T_k(i,j)$, which is a way of quantifying the extent of the overlap between the **template** and the unknown character. This distance $dist_k(r,s)$, can be defined as:
' l_{nk} l_{nk} ...large scanned image (e.g., several inches in both dimensions) while the size of the **template** is equal to the actual character size (about one tenth of an inch in both dimensions). - 35 As noted, the metric provided by Equation 1 gives the distance between the **template** and the test image starting at coordinate (r,s) . The **template** that provides the minimum distance in this equation is the "winner" and is chosen as the **template** that represents the character under analysis. If the character under analysis is the 0 character, then $dist_k(r,s) = 0$; in other words, the character and the **template** match exactly, an ideal situation. However, in practice, the test character as scanned will probably cause this distance metric to be non-zero for the matching **template**, but hopefully small, especially in comparison to the other $K-1$, non-matching (incorrect) **templates**. However, such discrepancies can lead to errors in the recognition process, and may cause the distance for a non-matching **template** to be smaller than the distance for the correct. **template**, resulting in an error and incorrect recognition. To relieve these problems, it has been discovered... $i=1$ $j=1$
In this equation, fitting parameter a scales the intensity of the **template** while fitting parameter b denotes a constant intensity bias. This approach is believed to be novel in that these parameters adjust the contrast of the **template** to match the contrast of the test data. Convenient expressions for fitting parameters a and...

Treatment: Practical (P)

Abstract: When it comes to supply management technology, a lot of procurement professionals are very interested in what's available, and they clearly understand the potential benefits. However, they often face challenges and roadblocks in implementing the technology, not only from hardware and software suppliers but from within their own organizations. Results of a recent PURCHASING survey indicate that purchasing professionals currently use a wide variety of technological tools. Today, the most widely used tools, in order of use; include purchasing software, MRP and MRP II software, Web-based e-**procurement** systems, **electronic data interchange** (EDI), enterprise resource planning (ERP) software and supply chain management software. Treatment: Economic aspects (E)

Abstract: Using the Internet to electronically submit RFQs (request for quotations) to suppliers for indirect materials purchases at GE Lighting not only significantly reduces cycle time, but buying costs as well. This process, called integrated indirect supply (IIS), is part of a corporate-wide initiative mandated in 1996 by Jack Welch, chairman and chief executive. IIS incorporates use of GE's company intranet, an extranet for supplier communication, **procurement** cards, and **electronic data interchange**. (0 Refs)

Language: English Document Type: Journal Paper (JP)

Treatment: Practical (P)

Abstract: In the United States alone, IBM does business with thousands of firms ranging in size from small shops to Fortune 500 companies, processes in excess of 2.8 million invoices, and disburses more than \$25 billion to suppliers each year. Several years ago, in a move toward a paperless environment, IBM's national **accounts payable** services implemented **electronic data interchange** with the larger firms. EC is now allowing the computer giant to move from juggling three million pieces of paper to a secure point-and-click purchasing environment. (0 Refs)

The electronic government gamble

Stein, Richard Marlon;

Computer v. 27 (Aug. '94) p. 104

DOCUMENT TYPE: Feature Article ISSN: 0018-9162 LANGUAGE: English

RECORD STATUS: New record

ABSTRACT: The writer argues that the proposal of electronic bureaucracy must be prevented from playing havoc with American lives. At the heart of this federal initiative is **electronic data interchange (EDI)**. **EDI-based procurement** could have disastrous consequences unless proper safeguards are designed into the system. Civil and criminal penalties must be stiffened to deter misuse of EDI systems for procurement, audit, or operational purposes.

The ABCs of enterprise procurement -- Corporate acquisitions departments can save money and time by moving to the Internet

Apicella, Mario

InfoWorld, June 26, 2000, v22 n26 p47, 1 Page(s)

ISSN: 0199-6649

Languages: English

Document Type: Articles, News & Columns

Geographic Location: United States

Presents a guide to electronic enterprise procurement, a Web-based means of creating specialized networks of suppliers on the Internet. Reports that a streamlined procurement process generates significant cost reductions and lower turnaround times. Says that electronic procurement portals resemble consumer-oriented Web sites and are suited to the purchase of simple commodities. Cites the pros and cons of **electronic data interchange (EDI)** networks. Mentions that outsourced **procurement** solutions overcome the fact that **electronic procurement** is difficult to develop and integrate with outside parties. Explains that the use of the Internet as a communications medium simplifies the exchange of information. Suggests that adopting platform-neutral middleware and Extensible Markup Language (XML) tools can simplify interconnectivity and data-exchange issues for companies contemplating in-house deployment. Includes a diagram and a sidebar. (MEM)

Ministry speeding up electronic commerce
SOUTH KOREA: MINISTRY TO BOOST E-COMMERCE
The Korea Herald (XBF) 23 Mar 1999 p.8
Language: ENGLISH

South Korea's Ministry of Information and Communications will put in US\$ 290 mn to set up CALS (commerce at light speed) systems and business-to-business information systems by 2002. This is part of the ministry to improve national competitiveness. The ministry will expand public **procurement** over **electronic data interchange (EDI)** from 1% in 1998 to over 80% by 2001 and to 100% by 2002. It will also promote electronic commerce in small and medium-sized industries by distributing standard enterprise resources planning (ERP) programs. The government will amend related rules so as to facilitate these efforts. It intends to encourage the setting up of CALS systems between appliance manufacturers and their component suppliers, while expanding Web sites for trade, customs clearance and export mediation. *

NCB to pilot Web procurement
SINGAPORE: NCB BETA TESTING WEB LINK MODULE
Computerworld (XCK) 27 Mar 1997 P.1
Language: ENGLISH

The National Computer Board (NCB) in Singapore is presently beta testing Web Link Module from Sterling Commerce. The module is a software which permits business to extend secure electronic commerce to SMEs over the World Wide Web. The NCB is co-operating with several firms over the project, with the beta testing to be completed in June 1997 and is the only Web Link beta test site in Asia. The NCB test could lead to a Web enabled version of the Electronic Procurement System (EPS). The EPS is currently evaluated by selected government ministries, which **automates** the **procurement** format by implementing **electronic** linkages with suppliers via the **Electronic Data Interchange**. The current emphasis on enabling electronic commerce by the NCB, is for Singapore to remain competitive and relevant, because it believes that there is a need to reduce transaction costs and adopt best practices. Sterling Software views Singapore as having a good infrastructure, as well as a creative and beta test centre for the company's products outside the United States.

US - EDI MAY SAVE TIME FOR DEFENSE DEPT
(Z) 26 August 1991 p32

The US Dept of Defense is turning to **electronic data interchange (EDI)** for handling **procurements**, which now number 50,000/day and involve a deluge of paper. The core of the Unix-based Electronic Commerce Operational Network (ECON) is a gateway hub linking a multitude of networks and bulletin boards used by govt and companies into a single system. Equipment sought will be routed to commercial information services and will be listed on bulletin boards to be seen by potential vendors via commercial value-added networks. The EDI pilot project is being set up by Lawrence Livermore Natl Lab for about 50 test suppliers at three DOD acquisition offices: Lawrence Livermore (Livermore, CA), the Wright-Patterson Contracting Center (Dayton, OH), and the Defense Personnel Support Center (Philadelphia, PA). The Lawrence Livermore system or a system like it will ultimately handle most federal procurements worth less than USD1r25,000. Article further discusses ECON.**

e-Commerce: Transit's new procurement frontier
Patterson, Emily;

Mass Transit v. 28 no4 (June 2002) p. 54-6, 58-9

DOCUMENT TYPE: Feature Article ISSN: 0364-3484 LANGUAGE: English

RECORD STATUS: Corrected or revised record

ABSTRACT: iRail LLC markets a wide range of products and services designed to facilitate e-procurement and supply chain management in the transit industry. Built on a WebSphere platform with IBM as its global partner, iRail offers solutions that support both public and private marketplaces, in addition to existing ERP and **legacy systems**. The company has around 3,000 registrants on its Web site and over 5,000 company profiles in its database, each carrying SIC, NAIC, or custom codes that reflect the products and services that each company offers. A profile is also presented of TransportMAX, an Internet-based marketplace that was launched in December 2001.

Alliance eases e-procurement

Moozakakis, Chuck

InternetWeek , January 15, 2001 , n844 p20, 1 Page(s)

ISSN: 0746-8121

Company Name: Rapt; Actuate

Languages: English

Document Type: Articles, News & Columns

Geographic Location: United States

Reports that Rapt and Actuate's partnership will result in a combined offering that will help **electronic procurement** managers to better control supply and demand curves. Indicates that Rapt's Buy software lets purchasing managers formulate complex quotes that factor in volume discounts, multisupplier sourcing, multiyear contracts, and other considerations. Says that Actuate's eReporting Suite combs databases, data warehouses, **legacy systems**, and other data stores to give users the information they need to make informed decisions. Explains that strategic sourcing is gaining favor as companies investigate how they can use e-procurement to trim inventory and processing costs. Mentions that the alliance will let Rapt and Actuate target trading exchanges as a prime potential customer for their applications. Includes a sidebar. (MEM)

MoD gets t578 to improve IT systems

UK: Ministry of Defence takes t578mn for IT
Computing (CNG) 25 Jul 2002 p.5
Language: ENGLISH

Each of the Ministry of Defence's agencies will be required to bid for a share of the GBT 578mn (US\$ 0.9bn) that the government has allocated to improve IT systems. The funding roll goes some way to compensate for a previous tendency to ignore IT in favour of frontline operations. The same spending review has approved GBT 3.5bn (US\$ 5.43bn) for the MoD over three years. Outdated **legacy systems** will be replaced and other services will be placed online. Additional funding will enable the MoD's business information systems to be modernised, especially its Defence Logistics Organisation (DLO). The DLO, set up in 1999, is involved in a 10-year GBT 45mn (US\$ 69.77mn) Defence **Electronics** Commerce Services e-**procurement** project rolled out by Cap Gemini Ernst & Young in 2001. The DLO's main competitor for funding within the MoD is likely to be the GBT 400mn (US\$ 0.62bn) Defence Information Infrastructure (DII), a project to oversee the outsourcing of the armed forces' non-military systems to the private sector.

E-commerce

World: Aerospace e-commerce expects good year
Flight International (FIL) 12 Feb 2002 p.27
Language: ENGLISH

BAE is an aerospace player that, like others in the sector, is taking its time to appreciate the benefits of E-commerce. Much of 2001 was spent assessing how procurement systems could be upgraded to benefit from the new facility. Recently, however, there has been an acceleration of activity. The use of Exostar (on which companies can bid for aeroplanes and other goods and services) for auctions in 2001 apparently saved the company months by enabling deals to be realised in a few hours on line. An established tool within the sector, Exostar expects to have 20,000 suppliers using the system by the end of the year. Exostar is one of three major e-market places to emerge in the aerospace business-to-business (B2B) e-commerce sector, which has had a turbulent embryonic phase that saw the exit of many. Cordiem and Aeroxchange are the other two main survivors. All have reported increased interest in their services since 11 September. The tragedy gave the sector a renewed priority in controlling costs and reducing cycle times. Buyers and suppliers are increasingly turning to online exchanges to improve efficiencies and cut costs. All three now claim to have in place the infrastructures to transact the kind of big business that is essential for ensuring longevity. The first really successful commercial year is intended to be 2002. BA is to focus on its engineering supply chain through Cordiem, Lockheed is conducting general procurement and reverse auctions via Exostar, and Northwest Airlines has used Aeroxchange sourcing services to reduce cycle times. Exostar's owners, Boeing, Rolls Royce, Lockheed Martin, BAE Systems and Raytheon, have had the system operating live since September 2000. While Aeroxchange and Cordiem focus on the commercial sector, Exostar stretches to the wider aerospace and defence markets. With 250 procurement systems and business with 40,000 - 50,000 suppliers, the five founding partners behind Exostar aim to connect suppliers and **procurement** systems **electronically**. Rolls Royce, the newest Exostar partner, is already sending out planning schedules electronically to its suppliers, so that they will know when to ship ordered materials. The news from Aeroxchange (founded by 13 airlines, including Air Canada and Lufthansa) is that membership now numbers 30, all of whom may list, buy, compare and sell from a constantly updated database of parts, repairs and services. Outdated **legacy systems** operated within airlines has been a major hurdle. Integrating back-end material management with real-time direct procurement has proved more difficult than expected. The multi-tier nature of Aeroxchange's service is gradually rising to the challenge, however. Four of the 13 founders should be fully capable of direct procurement by the end of the current quarter. Cordiem, an airline- and supplier-led venture formed by the merger of Honeywell/United Technologies-led My-Aircraft and AirNewco, is also reporting an upturn in demand. The latest product release, Cordiem 2.7, will support forward and reverse auction tools. Like Aeroxchange it foresees multi-year adoption programmes for the full integration of its services.

Conference Title: Proceedings of IEEE International Symposium on Requirements Engineering: RE '98

Conference Sponsor: IEEE Comput. Soc. Tech. Council on Software Eng

Conference Date: 6-10 April 1998 Conference Location: Colorado Springs, CO, USA

Language: English Document Type: Conference Paper (PA)

Treatment: Practical (P)

Abstract: An increasing number of organisations are procuring off-the-shelf systems from commercial suppliers. However, successful selection of off-the-shelf systems to fit customer requirements remains problematic. The London Ambulance Service fiasco in 1992 is a well-known example of system failure due, at least in part, to poor product selection. New methods and techniques for requirements acquisition and product selection are needed. The authors propose a new method which integrates techniques from several disciplines in response to lessons learned from a complex commercial off-the-shelf product selection exercise undertaken by the authors. They report on a recent experience in selecting a complex commercial off-the-shelf software system to be compliant with over 130 customer requirements, and lessons learned from the experience. These lessons learned inform **design** of PORE (**Procurement** -Oriented Requirements Engineering), a **template** -based method for requirements acquisition. This paper reports 11 of these lessons. Particular focus is put on the typical problems which arose during acquisition of requirements to enable this selection, and solutions to avoid these problems in the future. (0 Refs)

Amex to bring online help to purchasing managers

Kerstetter, Jim

PC Week , July 19, 1999 , v16 n29 p1, 22, 2 Page(s)

ISSN: 0740-1604

Company Name: American Express

Product Name: American Express@Work

Languages: English

Document Type: Articles, News & Columns

Geographic Location: United States

Discusses that American Express is announcing American Express@Work, an online service that will give managers and employees access to expense account and corporate procurement information. Says that the services will eventually be tied into electronic commerce and enterprise resource planning applications for human resources and financial management. Says that the online services will have features for both managers and end users. Describes that it will include tools for analyzing spending and customizing reports. Concludes that it will automate the issuance of corporate cards and **procurement** cards, as well as **creating templates** for managers to use online payment and purchasing. Includes one sidebar.

US 6272485	B1	G06F-017/30	

Abstract (Basic): WO 200049534 A1

NOVELTY - The system includes common gateway interface (CGI) sending script (20) residing on a network server (30), together with the documents (40). The CGI sending script instructs the network server to send an e-mail (50) to user e-mail address and to attach selected document in selected document format, to the e-mail.

DETAILED DESCRIPTION - The network server works several documents and CGI scripts. The CGI scripts provide a list of document to user at user terminal, from several documents. An INDEPENDENT CLAIM is also included for document transferring method.

USE - For transferring document over computer network using CGI script.

ADVANTAGE - Provides a remote user access to forms and other formatted or graphic documents across all major computing platforms without the need for secondary formatting software. Offers novel document transfer system utilizing a central service providing access to several documents from remote user stations which allow user to locate, retrieve and print fully formatted documents in user **designated formats**. Enables accessing formatted documents over a computer network which obviates the need to use specialized formats. The system has operating capability within an internet browser to permit selection and retrieval of documents without the need to install a browser plug-in, helper applications, decompression programs and to obviate the requirement for user to specify a document save location. Provides for Government agencies and other services or goods purchases, **procurement electronically** over computer network and eliminates much of required paper from procurement documents.

DESCRIPTION OF DRAWING(S) - The figure shows the document transfer system.

CGI sending script (20)
Network server (30)
Documents (40)

US 20020133470	A1		21	G06F-017/60	

Abstract (Basic): US 20020133470 A1

NOVELTY - A processor forwards a purchase document to an approval chain including multiple signatories when the document is complete and accurate. A material ordering and reporting expediter (MORE) program automatically e-mails the processor that the purchase order is approved, when the final signatory approves the purchase document. The processor prints an approval form containing information relevant to the purchase document and electronic signature of each signatory.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for purchase document coordination and approval method.

USE - For material ordering and reporting expediter system for managing purchase order related documents used at naval air, warfare center, weapons division, document used as worksheet for government bank card purchase and documents related to small **procurement electronic data interchange** (SPEDI) purchaser.

ADVANTAGE - Since the electronic signatures are used to verify the approval of purchase the need for a user to enter the identification data into the system for authentication is eliminated.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the material ordering and reporting expediter.

JP 2001325494	A	13	G06F-017/60	

Abstract (Basic): JP 2001325494 A

NOVELTY - Each customer provides an attachment master file associating the successful bidder code and the ordered material code. Master file is referred and required materials are designated in the successful bidder code at the time of procurement of order for required materials from the customer.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for the material procurement method.

USE - For **procurement** of materials through **electronic data interchange** system in business establishment.

ADVANTAGE - Eliminates customer code conversion load by performing procurement of order by referring master file associating successful bidder code and ordered material code and shortens operation time, eliminates operation mistake and rationalizes operation after order procurement.

DESCRIPTION OF DRAWING(S) - The figure shows the flowchart explaining the registration of customer master file and the order procurement process. (Drawing includes non-English language text).

NOVELTY - The system receives purchase orders from purchasers through a web site. At least one item to be purchased and the corresponding supplier, are identified and the purchase order is only viewed on the web site of relevant supplier. The acceptance of the purchase orders from the suppliers and the acceptance are viewed on the purchaser web site.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) Method for **electronic procurement** ;
- (b) Computer program product

USE - Internet based **electronic procurement** (EP) system.

ADVANTAGE - Provides a trading facility that integrates enterprise purchasing and payment processes into single system on a single global network for both purchasers and suppliers without the necessity for software installation and integration into existing **legacy system** . Provides Internet based EP system at minimal cost.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic representation of Internet based EP system.

**General procurement and accounts payable application preparation system
has server that maintain templates database describing application
preparing procedures on...**

...Inventor: CIRULLI P J

Abstract (Basic):

... 1) General procurement and **accounts** payable application
preparation method...

...4) Computer program product for preparing general procurement and
accounts payable application...

...For preparing general procurement and **accounts** payable application and
also for assessing, designing, developing and deploying them in service
company...

...The figure shows the high-level block diagram of the general procurement
and **accounts** payable application development implementation system...
